

Making A Voice Call

1. **Power On:** Ensure your Grandstream phone is powered on and ready for use.
2. **Dial Pad:** Locate the dial pad on the phone's interface. It's usually represented by a grid of numbers from 0 to 9.
3. **Enter Number:** Using the dial pad, enter the phone number you wish to call. Make sure to include the country code if you're calling outside your local area.
4. **Initiate Call:** After entering the number, press the call button, which is typically represented by a green phone icon, or a button labelled "Call."
5. **Wait for Connection:** Wait for the call to connect. You'll typically hear a ringing tone indicating that the call is in progress.
6. **Start Talking:** Once the call is answered on the other end, you can start talking. Ensure that your microphone and speaker are working properly.
7. **End Call:** When you're finished with the call, press the button or option to end the call. This is usually labelled "End Call" or represented by a red phone icon.

That's it! With these simple steps, you should be able to make a call on your Grandstream phone.
